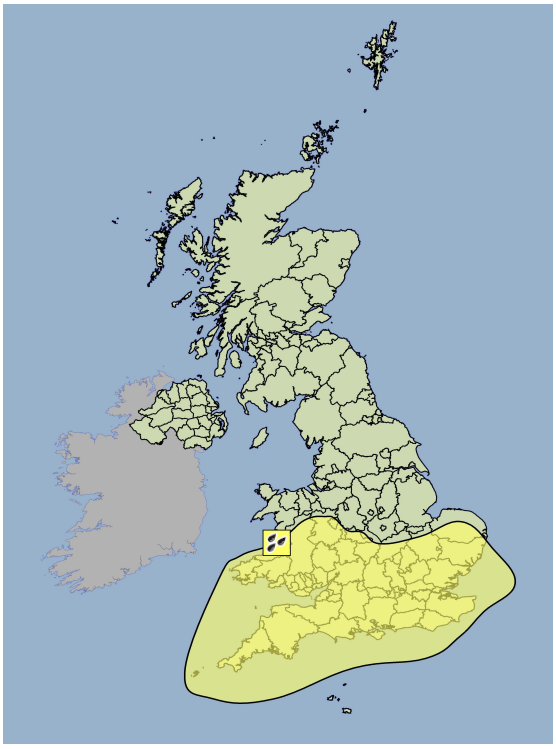
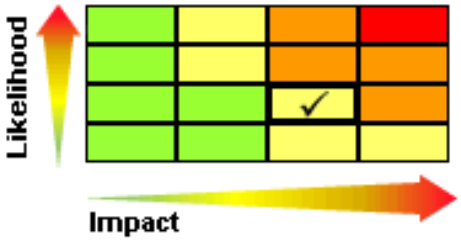
National Severe Weather Warning Service





Chief Forecasters Assessment
Yet another storm is now developing to the west of the Azores. It will run northeastwards across western parts of the UK during Friday and into Saturday, before clearing to the northeast. The associated frontal systems will bring spells of heavy and persistent rain, especially across the southern parts of England and Wales as well as further very strong winds (see separate warnings). 10-20 mm of rain will fall fairly widely in the Yellow Warning area, with 40 mm possible across parts of the southwest of England and south Wales.

There still remains some uncertainty in the track of this system, but it seems most likely that further periods of heavy rain will affect much of the UK and in particularly Wales and southern England on Friday and early Saturday.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **04:00 on Fri, 14th Feb 2014** until **06:00 on Sat, 15th Feb 2014**

A new area of rain will arrive in southwest England during the early hours of Friday, moving quickly northeastwards and affecting many parts of the UK. Following this rain, areas of organised showers will move across Wales and the south of England, adding to the rainfall accumulations. With very wet ground conditions in Wales and the south of England and following repeated heavy rainfall events earlier in the week, the public should be aware of the potential for further flooding in places. The rain will clear away from these most sensitive areas early Saturday morning.

The impacts from this rainfall may continue on some rivers on subsequent days and further information may be found by visiting the Environment Agency website or by calling the Environment Agency Floodline.

This is an update to the Alert first issued on Monday and should be viewed alongside the Amber warning issued for Friday.
